PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 4+ years of coding experience building scalable, high-performance applications with Go, Java, Python, and TypeScript. Experienced in API development, event-driven systems, databases, distributed workloads, and production-oriented software engineering, with a strong focus on reliability, performance, security, and maintainability.

CORE COMPETENCIES

Programming Languages: Go, Java, Python, TypeScript, C#, C/C++

Frameworks & Libraries: Gin, Spring Boot, Next.js, NestJS, .NET, React Native, FastAPI, TensorFlow, OpenCV, LangChain

Databases & Infrastructure: MongoDB, PostgreSQL, MySQL, Redis, Kafka, Docker, gRPC, WebSocket, Nginx

Engineering & APIs: REST APIs, Event-Driven Architecture, Git, GitHub Actions, Jest, Pytest

EXPERIENCE

OMNIRETAIL TECHNOLOGY LIMITED (OMNI)

Backend Engineer | JULY 2026 – PRESENT

- Develop and maintain Go-based backend services for Omni's fintech platform (Traction), supporting payments, virtual accounts, POS terminal management, loans, invoicing, and merchant operations.
- Build and maintain REST APIs using Gorilla Mux and Negroni, backed by MongoDB, across multiple business and payment domains.
- Work across a multi-bank/PSP integration layer connecting Providus, Wema, VFD, OmniPay, Paystack, Kuda, Globus, and FSDH for virtual account provisioning and fund transfers.
- Improved system reliability by implementing Kafka connection retries with backoff, graceful dependency degradation, panic recovery, and graceful shutdown for HTTP servers and background consumers, preventing isolated dependency failures from bringing down the application.
- Collaborate in a Git/Bitbucket-based engineering workflow, contributing through feature branches, pull requests, code reviews, debugging, and production issue resolution.

VISTA INTERNATIONAL LIMITED

IT Support Intern | JULY 2023 – OCTOBER 2024

- Provided L1/L2 technical support for 50+ users, diagnosing and resolving 70% of hardware, software, and OS-related issues across Windows and Linux within SLA timelines.
- Configured and troubleshoot network switches and routers, reducing internal connectivity issues by 30%.
- Troubleshoot boot failures, driver conflicts, and system performance bottlenecks across user workstations.
- Performed IP addressing, subnetting, and DHCP configuration for internal networks.
- Diagnosed network faults using ping, traceroute, and netstat; assisted with firewall rules and access control policies.
- Handled backup and recovery procedures to support data integrity and availability.

EDUCATION

COVENANT UNIVERSITY, NIGERIA

B.Eng. Computer Engineering | January 2021 – October 2025

- First Class Honours, CGPA 4.69/5.0. Relevant coursework: Software Development, Applied Computer Programming, Computer Networking & Security, Cryptography, Artificial Intelligence, Embedded Systems, and Microprocessor Systems.

PROJECTS

Dexxify | *NestJS, PostgreSQL, Redis, Docker, SSE*: Built and deployed a crypto payments SaaS for African businesses with API-driven checkout, payment links, wallet generation, crypto-to-fiat conversion, transaction processing, webhooks, merchant dashboards, and automated settlement.

ReeTrack | *Next.js, NestJS, BullMQ, Redis, PostgreSQL, Jest, REST APIs, WebSocket, Docker*: SaaS platform for community management with automated subscription billing, member tracking, payment processing, secure APIs, RBAC, and multi-tenant workflows.

Genesis | *Python, FastAPI, PostgreSQL, FAISS, LangChain, LangGraph, Streamlit*: AI assistant using RAG, vector embeddings, semantic search, tool orchestration, and multi-step task execution with external data sources.

TraVISS | *Python, YOLO, OpenCV, FastAPI, PostgreSQL*: Real-time traffic detection and tracking system using YOLOv11 to estimate and categorize vehicle density from live camera feeds.

RecommendIQ | *Python, Pandas, NumPy, scikit-learn, PostgreSQL, FastAPI*: Association-rule-learning recommendation engine for discovering product purchase patterns and generating recommendations.
