PROFESSIONAL SUMMARY

Fullstack Software Engineer with 4+ years of coding experience building scalable, high-performance applications using Python, Next.js, Node.js, and TypeScript. Skilled in translating business requirements into efficient code while maintaining a strong focus on user experience, performance, and maintainability. Experienced working in agile teams, integrating APIs, and deploying cloud-based solutions using Docker and CI/CD pipelines.

CORE COMPETENCIES

Programming Languages: Python, JavaScript, C++, Golang
Frameworks and Libraries: Next.js, React.js, NestJS, React Native, TailwindCSS, Express.js, FastAPI, Flask, Pytorch, Tensorflow, OpenCV, scikit-learn, Langchain, Gin
Tools, Databases, APIs: Git, PostgreSQL, MongoDB, MySQL, SQLite, BullMQ, Redis, Docker, gRPC, WebSocket, REST, AWS (S3, EC2), Github Actions, Jest, Mocha, Pytest, JWT, OAuth2, Postman, nginx

EDUCATION

B.Eng in Computer Engineering

COVENANT UNIVERSITY, NIGERIA

Earned a First Class CGPA (4.69/5.0) and completed relevant coursework in Applied Computer Programming, Software Development, Networking Basics, Analog and Digital Electronics, Embedded System Design and Programming, Digital System Design with VHDL, Digital Signal Processing, Cryptography principles, Microprocessor Systems and Interfacing, Computer Networking and Security, Artificial Intelligence and its applications.

EXPERIENCE

INVESTNAIRA

Front-end Developer | MARCH 2024 – MAY 2024

- Built and implemented the UI/UX designs of the web application, converted design mock-ups and wireframes into functional and high-quality code
- Worked closely with the design and back-end team to deliver the product, and conducted code reviews, testing, and debugging to ensure high standards.
- Implemented state management solutions (Redux, Zustand) for complex application flows
- Ensured mobile-first, responsive design across devices and screen sizes reducing page load time by 25%
- Integrated REST APIs with optimized data fetching and caching, reducing redundant requests by 35%

VISTA INTERNATIONAL LIMITED

IT Support Intern | JULY 2023 - OCTOBER 2024

- Provided L1/L2 technical support for 50+ users, diagnosing and resolving 90% of issues stemming from hardware, software, and OS-related issues across Windows and Linux environments withing SLA timelines
- Configured and troubleshoot network switches and routers, reducing internal connectivity issues by 30%
- Troubleshoot boot failures, driver conflicts, and system performance bottlenecks
- Performed IP addressing, subnetting, and DHCP configuration for internal networks
- Diagnosed network faults using tools like ping, traceroute, and netstat
- Assisted in configuring firewall rules and access control policies
- Handled backup and recovery procedures to ensure data integrity and availability

PROJECTS

- ReeTrack** | Next.js, PostHog, NestJS, BullMQ, Redis, PostgreSQL, Jest, REST APIs, WebSocket, Docker: SaaS platform for community management, enabling automated subscription billing, member tracking, and payment processing. Implemented secure APIs, subscription workflows, RBAC for secure multi-tenant usage, and optimized database performance.
- Genesis** | Python, Grok API, PostgreSQL, FAISS, FastAPI, Langchain, Streamlit, Langgraph: An AI assistant leveraging Retrieval-Augmented Generation (RAG) pipeline, vector embeddings, tool orchestration with langgraph enabling context-aware responses, semantic search, and multi-step task execution with external data sources.
- TraVISS** | Python, YOLO, OpenCV, FastAPI, PostgreSQL: Constructed a YOLOv11-powered real-time traffic detection and tracking system to estimate and categorize the density of vehicles from live camera feeds.
- RecommendIQ** | Python, Pandas, Numpy, scikit-learn, PostgreSQL, FastAPI: Designed an association rule learning-based recommendation engine to suggest products from purchase history patterns.
- Churn Pipeline** | Python, TensorFlow, Keras, Pandas, scikit-learn, FastAPI: Built artificial neural network architecture to predict employee churn, enabling proactive retention strategies.
- QuantTrend** | Python, TensorFlow, Keras, Pandas, Numpy, Matplotlib, scikit-learn, yFinance: Built a recurrent neural network model to forecast stock prices using historical time-series data.
- VisionNet** | Python, TensorFlow, Keras, OpenCV, Numpy, Matplotlib, PyTorch, FastAPI: Trained a convolutional neural network to perform accurate image classification across multiple categories.
